

# Smart General Ledger

The smart approach to classic double-entry accounting

**S**mart General Ledger (SGL) is an easy to use software implementation of an Accounting General Ledger. A General Ledger records all transactions that occur within your company. To ensure integrity and accuracy of financial information maintained, SGL employs classic double-entry bookkeeping. But as a user of SGL, you do not need to know anything about double-entry bookkeeping.

In a traditional general ledger, accounting periods must be defined and closing entries must be made at the end of each accounting year. SGL does not require specification of accounting periods or posting of closing entries. With SGL, you can prepare a Balance Sheet, an Income Statement and a Trial Balance over any time period, and at any-time. SGL also supports data entry in multiple currencies. SGL automatically translates entries posted in other currencies into your primary currency when preparing Financial Statements.

## SGL FEATURES

- Built upon the integrity and accuracy of double-entry bookkeeping
- Automatically creates commonly used accounts and entry shortcuts for you
- Full user control over chart of accounts
- Complete audit trail of all amounts posted
- Data entry in multiple currencies
- Does not require definition of accounting periods
